USE ANOTHER BOOK

By LRFD Design

Warning, this book has multiple issues that make me highly recommend not purchasing. I own the book and feel it is so poorly written and the ideas are so poorly described that I do not feel this information should be passed on to anyone, thus when I am done with my class I will burn this book. Here are some of the issues with the book:

Poorly defines variables and equations;

Graphs and figures are poorly described and detailed;

Example values that are given in the book are not explained or the method of calculation is not given;

Examples are poorly described, numbers are given with no definition or description or where they came from;

Variables have multiple meanings in the same example;

Examples are explained out of order from what is taught in the text;

Equations are poorly organized and described;

Questions at end of chapter use variable not described in the chapter;

Units are missing from many numbers, causing confusion of what they are;

Book makes assumptions about the reader that might not be true;
Book includes notes that are unpublished or not peer-reviewed;
Adds unnecessary variables;
There are not enough numerical examples to demonstrate ideas/points equations.

Some suggestions to improve this book:

Add about 40+ pages and separate equations and examples from the text, fully describe parts of the equation and how they interact and relate;

Have numerical examples for different problems.

I have only read about 1/3 of the book so far and have found these issues. **USE ANOTHER BOOK!**
