Montford, who conducts a blog mostly about climate, called Bishop Hill and used his accounting skills of patience and precision in dealing with heaps of data to tell a connected and, often, thrilling story. --HARRY EAGAR, Staff Writer The Maui News July 11 2010

You may have heard that the 20th century was the warmest in 1,000 years, or that the 1990s were the warmest decade in at least 600 years. Perhaps you also know that these claims originated in peer-reviewed science, which produced a temperature graph showing a hockey stick shape.

These claims are, in fact, bogus. It was obvious from the start that they were at least dubious, because when professor Michael Mann stated that his studies showed that "there was no Medieval Warm Period," the fact of a MWP had already been established, beyond dispute, by direct observations made by the French social historian Emmanuel Le Roy Ladurie.

Why, then, did Mann's hockey stick persuade so many people? A.W. Montford, an English accountant, does not answer that question - except indirectly, by showing that the people persuaded did not look at it carefully - but he does explain, in detail, why the hockey stick was junk science.

Improbably, the story reads like a murder mystery, a combination of locked room puzzler (how did Mann and his associates get a hockey stick where it could not have existed?) and courtroom drama (as Sherlock Montford presents the forensic deconstruction of the trick).

Montford, who conducts a blog mostly about climate, called Bishop Hill and used his accounting skills of

patience and precision in dealing with heaps of data to tell a connected and, often, thrilling story. Although the Hockey Team did, and is still doing, its best to keep its data secret, the persuasive advantage that Montford has is that all his claims are based on documents, many of which are reproduced in his book. "The Hockey Stick Illusion" deserves space on the shelf of classic books about science fraud like Peter Medawar's "The Strange Case of the Spotted Mice." Montford, though not a scientist, is a good choice to tell this story, for, as Medawar said, "There is poetry in science but also a lot of bookkeeping." --HARRY EAGAR, Staff Writer The Maui News July 11 2010

THE HOCKEY STICK ILLUSION: CLIMATEGATE AND THE CORRUPTION OF SCIENCE (INDEPENDENT MINDS) BY A.W. MONTFORD PDF

Here is the definitive exposé of the distorted science behind the iconic global warming graph centrally responsible for the global panic about climate change.

From Steve McIntyre's earliest attempts to reproduce the Michael Mann's Hockey Stick graph, to the explosive publication of his work and the launch of a congressional inquiry, *The Hockey Stick Illusion* is a remarkable tale of scientific misconduct and amateur sleuthing. It explains the complex science of this most controversial of temperature reconstructions in layperson's language and lays bare the remarkable extent to which climatologists have been willing to break their own rules in order to defend climate science's most famous finding.

The book also covers the recent leak of the email archives of the Climatic Research Unit which has led to the resignation of its Director, Professor Phil Jones, and exposed the degree to which climate scientists on both sides of the Atlantic have hidden and manipulated data to support their claims.

Mann Come Clean!

By Don Estreich

This is an amazing book. The deception of the global warming community is startling. When I earned my Ph.D. at Stanford University we were taught that openness and honesty, subject to peer review, was essential to honest and successful research. That is important for real scientific progress. Yes, scientists must have high ethics rather than think only about the next funding round. The foot dragging of Mann et al. is well documented with their own words in this book -- that is quite eye opening with regard to this group. If you have taken the hockey stick model for global warming as your religion, I dare you to read this book. (But I doubt you will.)

Little boys who tell lies will grow up to be weathermen!

By justanopinon

I love to read. I love math. It may sound sick, but I love to read about the math. This is a very well written explanation of how to take the scientific method and destroy the the credibility of scientists. Seems the developers of the hockey stick hoist a premise and then go about the process of proving it to themselves and using their allies to back them up. Noting that they seem to deny the process while hailing the process. If anyone every wanted to have it both ways, the Hockey Stick climatologist are those ones. I loved the book, but am disappointed in the field of Paleo Climatologist "Scientists" who claim a scientific basis for the

hockey stick. In a former life I flew airplanes and have a joke referencing the credibility of Weathermen. The joke actually fits these illusionists who developed the hockey stick. "Little boys who tell lies, will grow up to be weathermen (paleo-climatologist). If you like to read of the web of deceit weaved in our lifetime - this is a book that un-weaves that web of deceit.
