FLOW CYTOMETRY IN EVALUATION OF HEMATOPOIETIC NEOPLASMS: A CASE-BASED APPROACH BY SINDHU CHERIAN, BRENT WOOD PDF

Flow Cytometry in Evaluation of Hematopoietic Neoplasms: A Case-Based Approach is a practical, case-based guide to flow cytometric analysis in the workup of hematopoietic neoplasms presenting in the peripheral blood, marrow, lymphoid tissue, and extranodal sites. Using multi-color techniques pioneered by Brent Wood, the text demonstrates a unique approach to diagnosis of hematopoietic malignancies as well as identification of small abnormal populations in the posttherapy setting (minimal residual disease testing). The publication contains an introduction to immunophenotypic changes seen in normal hematopoiesis along with an overview of the evaluation of lymphomas, leukemias, and myeloid stem- cell neoplasms. These concepts are further illustrated by a series of 36 cases, each dedicated to a specific disease entity. Each case provides detailed, full-color images of flow cytometric dot plots that clearly outline the features of the disease, accompanied by a clinical history and thorough discussion, enabling readers to develop and work through a differential diagnosis and recognize potential diagnostic pitfalls. Take-home points for each case emphasize critical concepts in flow cytometric diagnosis. Flow Cytometry in Evaluation of Hematopoietic Neoplasms provides pathologists, residents, laboratory technologists, and hematologists with both a study guide and an atlas for regular consultation in the clinical flow cytometry laboratory. The 2008 World Health Organization (WHO) classification system, French-American-British (FAB) classifications, and 2006 Bethesda Consensus recommendations are incorporated in the text.
